

Backpacks

Enabling innovation for commercial off-the-shelf mobile devices.

PRIVORO'S FIRST-OF-ITS-KIND PLATFORM IS BRINGING INNOVATION TO THE MOBILE MARKETPLACE.

While smartphones may be indispensable tools, they lack the space and power to accommodate hardware innovations needed to extend their utility. Instead, specialized offerings are often relegated to dedicated devices, which can be both time-consuming to develop and cumbersome to use. SafeCase™ overcomes these obstacles, bringing modularity to commercial off-the-shelf devices while allowing hardware developers to leverage the ultra-secure Privoro platform and quickly bring their innovations to the marketplace.

Whether developed by Privoro or authorized third-party partners, new hardware functionalities are delivered via a standardized backpack-modular, detachable devices that may include

sensors, communications modules and more. This modularity increases the efficiency of development by leveraging the platform's capabilities, services and trust.

Backpacks

BRINGING INNOVATIONS TO SAFECASE CUSTOMERS.

While smartphones have apps for just about everything, backpacks will enable highly specialized, sophisticated and industry-specific tools to customers. Tools we've just

begun to explore internally and with potential development partners. These tools may not currently be available or are not currently available in a lightweight form factor.

CUSTOMER BENEFITS

High-security capabilities

Hardware add-ons can take advantage of the high-security foundation provided by the SafeCase™, giving organizations piece of mind that the data captured via backpacks is handled in a secure manner.

Future-proof technology

SafeCase enabled organizations can take advantage of future hardware innovations without the need to build or purchase one-off devices or upgrade smartphones.

Convenient user experience

The SafeCase conveniently couples with a user's ever-present smartphone, and backpacks can be attached in seconds.

DEVELOPER BENEFITS

From sensing to processing, the opportunities for developing specialized hardware add-ons is almost limitless.

- **Biosensing**
- **Intelligent-edge processing**
- **Environmental sensing**
- **Biometric reading**
- **Mobile ad hoc networking**
- **RF detection**
- **Satellite communications**
- **and much more**

Accelerated development

Rather than starting from scratch, hardware developers can leverage the SafeCase's capabilities and platform architecture to rapidly prototype new products without having to develop entirely new, stand-alone devices.

Built-in customer base

Once products are market-ready, hardware innovators will benefit from Privoro's expanding sales channels and relationships to reach an already qualified customer base.

Burgeoning market segment

As we pioneer an entirely new market segment within the rapidly expanding mobile security space, our hardware partners will reap the rewards of being at the forefront of this new technology platform.
