*Note: Your privacy guard was shipped in hibernation mode to preserve the battery. Before using the first time, connect device to a power source for at least 1 minute. We recommend fully charging the privacy guard before using, as the battery may be partially depleted.*

## [COMPONENTS]

*This sophisticated device is designed to protect you from surveillance and location tracking, yet the components are simple to identify and use.*

### [CASE]

### [COVER]

## [CASE]

### Inserting your iPhone 6/6s

*Remove screen protectors and protective cases before inserting your iPhone into the Privacy Guard case.*

1. Raise the hood by holding the case in one hand. Using the other hand, place your thumb on the front and your forefinger on the back of the hood and gently lift.
2. Align and press the bottom of the phone into the case about  $\frac{1}{4}$  inch above the Lightning connector.

3. Keeping the bottom of the phone flush against the case, gently slide the phone down onto the Lightning connector - press firmly from the top of the phone to ensure the phone is seated.
4. Push on the top front portion of the phone so that it rotates back fully into the case.
5. Lower the hood by pushing down on the top of it.

## [CASE]

### How it works

#### HOOD DOWN

(and power on)

Microphone & camera/video protection is active

#### HOOD DOWN

(and power off)

Camera/video protection is active,  
audio masking protection is off

#### HOOD UP

Microphone & camera/video protection is deactivated

#### BUTTON

Pressing button activates audio masking protection

1. Press and hold button for 3 seconds to activate. A white light will come on, indicating that audio masking has been activated.
2. Additional quick presses of the button will rotate through 3 brightness modes.

## [COVER]

### Securing the cover

With the hood down, slide the cover over the case until you feel it lock into place.

### Activating/deactivating audio protection

Audio masking can be activated or deactivated with the cover on or off, by pressing the button. When the cover is on, press the button through the access window.

The other side of the reversible cover does not have an access window - cover button with this side to prevent accidental access to the button.

## [COVER]

### *How it works*

#### COVER SECURELY IN PLACE

Location tracking/radio frequency protection on

This gives you full protection from location tracking and radio frequency hacking (via cell tower, Wi-Fi, Bluetooth, GPS) regardless of whether or not you have activated audio protection.

Camera/video protections are automatic when the cover is on because the hood is in the down position.

*Important: Inside the cover are tiny metal, gold-plated "fingers" that are essential for full protection. Take extreme care not to bend or damage these fingers.*

## [COVER + CASE]

### *Removing the cover*

1. Put one hand around the cover. With the other hand, grip the bottom of the case at each side.
2. Pull the cover up and off.

### *Removing iPhone 6/6s from the case*

1. Raise the hood.
2. Place your index finger on the back of the phone (near the camera lens) and gently press forward.
3. Pull the phone off the case. Lightning connector and out of the case.

## [PRIVORO APP]

Download the Privoro app from the Apple App Store to monitor your privacy guard's performance in real time.

Protection

## [THE INDICATOR LIGHT]

The indicator light on the button is designed to advise you when audio masking is on or off and the status of the battery level. Below is a guide to the different light combinations.

- SOLID WHITE LIGHT** = audio masking is ON and battery level remaining is greater than 15%
- ALTERNATING WHITE/RED** = audio masking is ON and battery level remaining is less than 15%

*When connected to a USB power source (case is charging)*

- ALTERNATING WHITE/AMBER** = audio masking is ON and the battery level is less than 95%
- ALTERNATING WHITE/GREEN** = audio masking is ON and the battery level is greater than 95%
- SOLID AMBER** = audio masking is off and battery level is less than 95%
- SOLID GREEN LIGHT** = audio masking is off and the battery level is greater than 95%

*Note: When the case is first connected to a USB power source a green light will flash three times, indicating that the battery is now out of hibernation mode (the mode it is shipped in). This is a one-time occurrence.*

## [CARE AND MAINTENANCE]

To ensure maximum performance and prevent damage to your privacy guard, keep the case and cover away from food, water and debris.

Should the gold-plated fingers on the interior of the cover become dirty, use a soft dry cloth and gently wipe the fingers toward the center of the cover, being cautious not to catch, break or bend the fingers on the return stroke.

When the cover is not on the case, leave the opening face-down to minimize the risk of debris falling into the cover and onto the fingers. To clean the exterior of the cover and case, use a damp cloth or non-astringent cleaners. Do not spray or saturate the case or cover in liquid.

## [CONTACT AND WARRANTY INFORMATION]

Visit [Privoro.com](http://Privoro.com) or call 1-844-PRI-VORO (1-844-774-8676) for assistance and information on Privoro's one-year limited warranty.
