

Company Overview

OUR HISTORY

Experienced technology entrepreneur Mike Fong founded Privoro in 2013 out of a simple belief: that compromising security and privacy to participate in today's ultra-connected, sensor-driven world is unacceptable.

OUR MISSION

We're committed to enabling businesses, governments and individuals to take control of when and how they allow access to their most important and sensitive information.

OUR FOCUS

We've chosen to initially focus on tackling security problems around commercial smartphones. For most of us, smartphones are the most important devices in our lives, and yet, the data available through these devices can too easily be compromised by sophisticated threat actors.

OUR VISION

We're working hard to deliver a new class of devices that provide a variety of intelligent mobile protections and services that are rooted in high-security hardware and operate independently of, but work alongside, commercial smartphones.

OUR COMMITMENT TO SECURITY

Our products are designed and built to a nation-state threat model across the entire system, requiring a complex orchestration of a range of disciplines. We never take shortcuts or cut costs when it comes to security.
